Message from the Guest Editor

Dear Colleagues,

Modern spectroscopic techniques have proven to be indispensable in research related to life sciences, where the objects ranging from biocomplexes to supramolecular structures and further to cells and tissues are commonly highly complicated. Spectroscopic approaches allow their structural and compositional features to be investigated at the molecular level, which is often unattainable by other means. Moreover, many spectroscopic techniques are non-destructive, which is of paramount importance for biological samples. This Special Issue of *IJMS* will include a collection of expert-level experimental and review-type papers where the main results were obtained using a wide range of modern spectroscopic techniques applied to biochemical and microbiological problems.

Message from the Editorial Board

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed by the **Science Citation Index Expanded** (Web of Science), MEDLINE (PubMed), Scopus and other databases.

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 15.7 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2019).
